

Redmine - Feature #26071

Generate markup for uploaded image dropped into wiki-edit textarea

2017-05-30 16:16 - Felix Gliesche

Target version:	3.4.0		
Resolution:	Fixed		
Description			
<p>As it is already possible to upload files by using drag n drop, it'd be a great UI improvement to immediately generate the markup for an image when dragged into a textarea. We have seen this feature at github and think it would be a great UI improvement to redmine. For example, if you drag an image into an issue's description field you'll get (if formatting is set to textile) or (if formatting is set to markdown) at the current cursor position.</p> <p>9We0m7yICa.gif I am attaching a patch that introduces this feature into redmine. Allowed are all image file types that are listed in redmine's mime_types. The behavior remains the same for all other file types / non-image file types.</p>

Very nice improvement!

#2 - 2017-05-30 17:25 - Go MAEDA

- Target version set to 3.4.0

I have been wanting this feature for a long time. It is a great improvement.

I tried out the patch and works very fine. I think there is no reason not to deliver this feature in upcoming 3.4.0.

A small update: This updated patch sanitizes filenames correctly.

Great, could this patch support file names with spaces too? [#10189](#)

Yes! This patch works for filename with spaces, because it encodes the filename accordingly before generating the markup.

#8 - 2017-05-31 21:46 - Mischa The Evil

Nice improvement indeed. LGTM.
