Redmine - Patch #26104

Quick jump to issue only if searching for issues

2017-06-06 15:31 - Holger Just

**Description**

Previously, we would always jump to the issue if a user searches for a number which exists as an issue ID, regardless where the user searches. That made it impossible to search for e.g. prefixes of phone numbers in wiki pages.

With the attached patch, we are only jumping to the matching issue if we are searching for issues. This results in a behavior change for the quick search box in the wiki and other areas. Previously, we would also jump to an issue there. Now, we just search in the wiki for the number.

The quick search bar in issues as well as the global search for all objects is unaffected by this change.

**History**

I don't know, I like to be able to quick jump to an issue wherever I am.
What about enabling quick jumping to an issue when using the quick search field only?

BTW, you can still search for a number (without quick jumping to the issue) by double-quoting your search term.

I would prefer quick search for issues from anywhere (as is today) just prefixing "#" to the issue number.
What about?
Thanks

Hmm... I currently always reliably jump to a ticket when I enter its number in the quick search and confirm with "Enter".
If I start with # and then enter a term from the title of a ticket, suggestions with matching tickets automatically appear...

For me, everything works perfectly as it is right now. (5.0.7)
