Description

Rational:

From time to time, it happens that I want to edit a wiki page that is included in another one. First, I have to edit that main page, to figure out the name of the included page. Then, I click on "Index by title" to see the list of wiki pages, then look for the page. And at last, I click edit.

This is not a straightforward process. It can be improved a lot.

Expected improvement

Example with 2 wiki pages.

Main wiki page

Example of icons, for direct editing or viewing of wiki page.

Below, an included wiki page.

```
{{include(included_wiki_page)}}
```

Above, the included wiki page.

Included wiki page

```
> This is the included wiki page content
```

At the right, the icons edit.png and magnifier.png are click-able, and allow to edit and view the included wiki page.

Example of icons, for direct editing or viewing of wiki page.

Below, an included wiki page.

This is the included wiki page content

Above, the included wiki page.

New file

New wiki page Edit Watch Lock Rename Delete History

Also available in: PDF | HTML | TXT

Proposal

Based on the plugin **redmine\_include\_macro\_extension**, created by [Taiki I.](#), I have implemented this feature in a fork of that plugin :

[https://github.com/sbriand/redmine\\_include\\_macro\\_extension](https://github.com/sbriand/redmine_include_macro_extension)

Request

Is it possible to add this feature in the Redmine core?
