

Redmine - Patch #2634

Refactoring of error messages

2009-01-31 21:26 - Brad Beattie

Status: Closed	Start date: 2009-01-31

Target version:	

Description

Seems that there were two methods of declaring errors: #errorExplanation or div.flash.error. Considering they were both used in the same way, I'm not sure why two are necessary. The following patch replaces all instances of the former with the latter.

- Status changed from *New* to *Closed*

#errorExplanation is common id for error messages in a form, .flash.error is for any kind of error.

Since both can be used in plugins, we can't change them easily now. I close the issue.
