

Redmine - Defect #2650

MediaTemple repository setup

2009-02-03 00:59 - Brady Georgen

Status:	Closed	Start date:	2009-02-03
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description I've been on the horn with MediaTemple all day regarding linking my subversion repo with my redmine app instance that they're serving. MediaTemple requires a svn+ssh:// access from outside, but I thought I could just use a file:/// call since its on the same server. No luck. If there are any good tutorials on setting this up or just tuts on setting up RedMine with a Subversion server, I'd be really happy to know of them.
