<b>Description</b> I love the watch-feature. I use it all the time, for all kinds of reasons: <ul style="list-style-type: none"><li>• Issues that i want to talk to the reporter</li><li>• Patches i consider adding to my stack</li><li>• Good examples of issues to show other</li><li>• Issues to keep track off (i suppose original usage).</li></ul> My problem? Well, memory isnt what it once was (or was it ever). I have some pages of watched issues, but some of them i am not sure why i watched. Less problem here on redmine.org, more i clients installations where they often are part of feedback to give (but in person, not as comment).  Would it be possible to add a personal comment as well when tagging an issue with watch? And attach that to watch-emails? Is this interesting enough for others?  /T
