Description

So I've set up my Redmine to display issue comments in reverse chronological order.

I have an issue with hundreds of comments. When I hit Edit, the form is displayed at the very bottom of the page.

To me, it would make more sense that the Edit page shows above the latest comment, so there is no need to Scroll all the way up to see what are the latest comments as I am adding new ones.

So:

- "Show comments in chronological order": Edit form is at the very bottom of the page
- "Show comments in reverse chronological order": Edit form is displayed above the top comment

Does this makes sense?

I totally agree with you but I am closing this issue as a duplicate of #23518.
