For product planning and project management, I propose in addition to Feature #1953

- make unit of estimated time configurable (is a float anyway)
- support time unit days in addition to hours (maybe even weeks and at least for the Feature tracker)
- make this configurable differently for Feature/Support/Bug trackers.

To avoid the need to provide converting routines, when change of unit is allowed later

- internally the unit could stay hour (estimated, spent) and
- a day should equal 8 hours (or configurable amount).

---

<table>
<thead>
<tr>
<th>value</th>
<th>display</th>
</tr>
</thead>
<tbody>
<tr>
<td>24.0 hours</td>
<td>3.0 days</td>
</tr>
<tr>
<td>0.5 hours</td>
<td>30 minutes</td>
</tr>
<tr>
<td>40.0 hours</td>
<td>1 week</td>
</tr>
</tbody>
</table>

It would also be nice to have mixed formats.

---

<table>
<thead>
<tr>
<th>value</th>
<th>display</th>
</tr>
</thead>
<tbody>
<tr>
<td>48.0 hours</td>
<td>1 week 1 day</td>
</tr>
</tbody>
</table>

- Has duplicate Feature #22578: change estimated time -- 'hours' to 'days' added

#7 - 2016-09-21 09:01 - Carsten S
+1

#8 - 2017-07-05 22:47 - Mischa The Evil
- Related to Feature #877: ability to vary the units used to track time added

#9 - 2020-10-15 11:47 - Alexandre WALLET
Up !
Use days/weeks is definitely a need for some projects containing hard or not direct steps.
It would be so handfull to set a start date and a estimated time so that the end date is calculated by itself and then appear in gant etc.

This is one of the basic limitation that is mainly reported by managers in my company.

This need has 11 years, so sad thing have not changed :(

+1 !
This is a real need I think also to have the choice to get time expressed in hours or days, week, years
