Target version:				
Resolution:	Invalid		**Affected version:**	3.4.3

Description

I use REDMINE for many years. Yesterday, I upgraded my REDMINE from 3.3.1 to 3.4.3 after switching to FREEBSD 11.1 (prev 11.0). I upgraded ruby too.

Everything seems to be ok : Yesterday, I created a new version of my project, added new files and created a news.

Today, I see I didn't receive any email notifications...

I try to send an email from the console : ok (mail x@x.com , echo "Subject: test 3" | sendmail -i -v x@x.com) .
I try to send a test email from redmine : it says ok but nothing is done. No error, no log...

I use msmtp and mstmp log is enabled.

my configuration parameters :

    production:

        email_delivery:
        delivery_method: :async_sendmail
        async_sendmail_settings:
        arguments: -i

History

I've just tested and email works in 3.4.3.
There is something definitely on your side or misconfiguration.
I'd suggest you to check redmine and mail logs.

#2 - 2017-10-19 18:29 - Toshi MARUYAMA

- Status changed from New to Closed

- Resolution set to Invalid
