Description	
<p>Here's a capture of what I would like to see improved.</p> <p>When I am editing a Wiki page and choosing a "Parent" page, I have to scroll through the list to find the exact page I want. The double ">>" and possibly the white-space prevent me from quick-jumping to the letter "V" for this example.</p> <p>example1.png</p> <p>However a "top-level" page such as "Wiki" in the capture below, I am able to "quick-jump" by pressing "W".</p> <p>example2.png</p> <p>It would be very beneficial to have complete quick-jump functionality, for example, if I started typing the letters "vmw" it would focus on the first matching string.</p> <p>Thanks!</p>
