History

#1 - 2017-10-26 11:33 - Go MAEDA

- Tracker changed from Patch to Defect
- Status changed from New to Closed
- Resolution set to Invalid

Probably your database file is corrupted. You can see the message "SQLite3::CorruptException: database disk image is malformed" in the log.

I am closing this issue because it is not a problem of Redmine core.

#2 - 2017-10-26 12:29 - Toshi MARUYAMA

- Priority changed from Urgent to Low

You should not use SQLite for production.
