Target version:				

Description

I was having problems setting the repo directory gid. It defaults to either the project owners gid (sometimes non existent) or 0 (user running script may not be able to set). I have never coded ruby. I am a php programmer by trade, so please review this. I added a group option and a default group root. Hopefully, this'll help someone else.

Associated revisions

Revision 2478 - 2009-02-16 20:33 - Nicolas Chuche

Fixed: add group option to set the repository gid. Default is root (#2747)
