Description

I'd like to have support for plain HTML in the Wiki to be able to use tables and other stuff currently not supported by the markups. Maybe something like {{{HMTL ... }}} can be used to put HTML code directly in the WiKi.

Usage Example:

{{{HTML
<table>
<tr><td>r1c1></td><td>r1c2</td></tr>
<tr><td>r2c1></td><td>r2c2</td></tr>
</table>
}}}

History

Using plain HTML is a must have for us too...

#2 - 2011-12-20 10:28 - Dieter Egert

upto now you have 2 possibilities to use HTML in redmine's wiki:

Plugin 'Redmine Wiki HTML Util'
Allows you to embedd RAW HTML into your wiki, load stylesheets and javascript.
Made for html/css/js by Arlo Carreon (http://www.arlocarreon.com/blog/redmine/redmine-wiki-html-utility)
Creates new macros html() css_url() js_url()

Extended HTML-formatting in redmine:
your Administrator needs to change
self.filter_styles=false (in /lib/redmine/wiki_formatting/textile/formatter.rb)
(source: http://docs.redmight.com/projects/1/wiki/5_Formatting_tips_and_tricks)
Then this works:
p{html-code}. text block

It would be nice, just to allow these functionalitites in the base code of redmine.

I think this could be dangerous in terms of security.
Someone could inject code, an do e.g cross site scripting.

Ever owner of a domain should pay attention to offer such features to user's
