

Redmine - Defect #2757

Unable to register using OpenID

2009-02-15 20:52 - Jean-Philippe Lang

Status:	Closed	Start date:	2009-02-15
Priority:	Normal	Due date:	
Assignee:	Eric Davis	% Done:	100%
Category:	Accounts / authentication	Estimated time:	0.00 hour
Target version:	0.9.0	Affected version:	
Resolution:	Fixed		
Description			
Using r2476, assuming I have no redmine account: <ul style="list-style-type: none">- on the login form, I enter my openid url- I'm redirected to my openid provider, I accept to access the site- I'm redirected to the redmine registration form (only the openid url is filled)- I fill the form (btw, why do I have to enter a password?)- I hit Submit- the registration is displayed with the login field empty and the error message "login can't be blank"- same error if I re-fill the login and re-submit Full log is attached (openid url filtered).			

Associated revisions

Revision 2483 - 2009-02-20 01:31 - Eric Davis

Fixed the bug in the OpenID registration where the form wouldn't take a login

AccountController#open_id_authenticate was adding an auth_source_registration to the session which caused AccountController#register to use the wrong codepath.

#2757

History

#1 - 2009-02-18 05:42 - Eric Davis

- File *development.log* added
- Affected version (unused) set to *devel*

Looks like your OpenID provider doesn't send back the sreg information, which is required to setup the account. This is because Redmine requires a login (sreg 'nickname'), mail (sreg 'email'), firstname, and lastname (sreg 'fullname') in order to create a user. You can see my OpenID provider sends back the sreg so I was able to create a user account on the fly (second to the last request)

1/2

| - I fill the form (btw, why do I have to enter a password?)

Because Redmine requires a password :) If the user was able to be created on the fly, they get a random password (User#random_password) but since saving your user account failed the password wasn't set.

- I hit Submit
- the registration is displayed with the login field empty and the error message "login can't be blank"
- same error if I re-fill the login and re-submit

This sounds like a problem with the register form itself. Let me do some more testing and see

#2 - 2009-02-18 05:49 - Eric Davis

- File *development.log* added

Last log used the wrong database, where I had an existing user account. This log shows the process for a new user that needs an Administrator to approve the account activation.

#3 - 2009-02-18 05:49 - Eric Davis

- File *deleted (development.log)*

#4 - 2009-02-20 01:33 - Eric Davis

- Status changed from *New* to *Closed*
- Target version set to *0.9.0*
- % Done changed from *0* to *100*
- Resolution set to *Fixed*

I figured out why it wasn't taking your login. AccountController#open_id_authenticate was adding an auth_source_registration to the session which caused AccountController#register to use the wrong codepath. It's fixed in r2483.
