Description

Hi!

It would be great if redmine could pull the image from the jpegPhoto attribute from ldap for user thumbnails just like gravatar is implemented.

So a checkbox under Settings -> Display which sais something like "Enable avatars from ldap".

And in the ldap integration add a field for avatar where one can specify the image field in ldap, default jpegPhoto

There are plugins which let you do that...

Aaah, nice!

Didn't find that one when I was googling the other day.
