Target version:			
Resolution:			
Description			
<p>If you are adding new file to Documents section of project, it would be great to have ability to add file or URL.</p> <p>For exaplme, we are using Google Docs very frequently for our project documentation, so in most cases we have mixture of offline (files) and online (urls) documents for each project. This is also applicable for any other online doc storages.</p>
