Description

casecmp method doesn't work with Unicode symbol - [https://bugs.ruby-lang.org/issues/14055](https://bugs.ruby-lang.org/issues/14055)
decision is to use casecmp? instead of casecmp - [https://bugs.ruby-lang.org/issues/12786](https://bugs.ruby-lang.org/issues/12786)

Could you add test?
source:trunk/test/unit/attachment_test.rb@17111#L386

#3 - 2017-12-12 03:24 - Go MAEDA

Амир Мусин, thank you for reporting the problem and providing the patch.

But the patch needs some improvements because Ruby older than 2.4 don't have casecmp? ([https://github.com/ruby/ruby/blob/v2_4_0/NEWS](https://github.com/ruby/ruby/blob/v2_4_0/NEWS)). The upcoming Redmine 4.0.0 supports Ruby 2.2.2 and later (#25538).

- Related to Patch #20369: Use String#casecmp for case insensitive comparison added

#5 - 2018-11-06 04:00 - Go MAEDA
- Target version set to Candidate for next major release

We can merge this patch if Redmine migrates to Rails 6 (maybe in Redmine 5?).

Rails 6 requires Ruby 2.4.1+ by jeremy · Pull Request #32034 · rails/rails

```

We can apply the patch provided by Амир Мусин and fix the issue for Ruby >=2.4 right now if we define String#casecmp? method like the following.

Even if we define the method, the problem will not be fixed under Ruby 2.3 because the fake String#casecmp? is not Unicode-aware unlike the genuine String#casecmp?. But I think it is OK because the Ruby team has ended support for 2.3 last month and probably many people who use the latest version of Redmine don't use such old Ruby.

We can delete the definition when Redmine has dropped the support for Ruby 2.3.
