Description			
Hi,			
Love the software and use the Wiki a fair bit. I'd really like an option to be able to save the current content for a given page, without being redirected back to the show action. Sort of like a 'save my content, and continue to make edits'.			
Just a thought..			
Ash.

I agree this is an important feature. I'm often working for an hour or more creating a new wiki page describing a complicated issue in full detail, and would love a button similar to "preview" which does a save, without leaving the edit page.

Or perhaps an autosave feature would be an alternative?

#2 - 2009-07-29 02:55 - Ashley McKenzie

- File *redmine_save_and_continue.diff* added

Proposed patch diff (contains only English locale change only sorry)

#3 - 2009-12-04 09:42 - Udit Sajjanhar

Wouldn't it be nice if the button could save the work via an AJAX call. This would provide an unobtrusive alternative.

What do you guys think?

+1

#5 - 2014-06-25 15:03 - Daniel Wagner

Eighter of this features would be awesome to have. Save without leaving edit mode or an auto save feature.
