

Redmine - Feature #2792

allow title on any link

Description As of Redmine 0.8.0.stable.1655, there is no way I can find to give a title to links other than wiki links (using <code>[[... title]]</code>) and external http: links (using <code>"title":http://...</code>).			
). This means it's impossible to, say, title a source: link or an email address.			
It'd be nice to be able to title these links too. It doesn't really matter how--either "title":... or <code>[[... title]]</code> , or some other way.

If this is meant to be in wiki text - the work of this is already done.

If this is related to custom field this is related to another related issue - [#5794](#). [#2792](#) and [#5794](#) are almost duplicates.

I'm sorry for asking . But in the latest version of RM, is it possible to reender custom field in URL to value. For instance, i have custom field `issue_custom_field_values_13` but when URL is reendered, i don't get actual value from that field in URL.

Are these only options to do that:

```
Link values to URL: creates a URL using the following variables.
  value => the custom field value
  id => id of the customized object
  project_id => id of the project of the customized object if defined
  project_idenfifier => identifier of the project of the customized object if defined
  m1, m2... => capture groups matches of the custom field regexp if defined
```

Thanks
