

Redmine - Defect #2827

{{{foo}}} without spaces incorrectly imported

2009-02-24 17:28 - Daniel Svensson

| | | | |
|--|----------------|-------------------|------------|
| Status: | Closed | Start date: | 2009-02-24 |
| Priority: | Normal | Due date: | |
| Assignee: | | % Done: | 0% |
| Category: | Importers | Estimated time: | 0.00 hour |
| Target version: | | Affected version: | 0.8.1 |
| Resolution: | Cant reproduce | | |
| Description | | | |
| When importing {{{foo}}}, note that there are no spaces between curly braces and the word within them, the result is <pre>. If I instead add space between the braces the result is properly interpreted as <pre>foo</pre> | | | |

History

Humm.. further investigation hints that this might be a problem with one-liner {{{ }}} everywhere no matter if they have spaces or not.

#2 - 2009-02-24 18:02 - Daniel Svensson

Maybe oneliner {{{Inline Code}}} should be translated to Inline Code?

#3 - 2009-02-24 18:03 - Daniel Svensson

@Inline Code@

even

#4 - 2009-02-24 18:18 - Daniel Svensson

oh the spam, oh the sorrow.. forgot to mention that is is an issue with the Trac importer.

#5 - 2009-02-26 07:10 - Daniel Svensson

Add following somewhere in convert_wiki_text:

```
# Inlined code
text = text.gsub(/\{\{\{([^\n]+\n)\}\}\}/) { |s| "@#{s.strip}@" }
```

Test cases:

```
puts convert_wiki_text("{{{ spider pig spider pig }}}")
puts convert_wiki_text("{{{spider pig spider pig}}}")
puts convert_wiki_text("{{{\nspider pig spider pig\n}}}")
```

Output:

```
@spider pig spider pig@
@spider pig spider pig@
<pre>
spider pig spider pig
</pre>
```

#6 - 2013-01-04 10:01 - Daniel Felix

Hi there,

are there any news on this? Is this still reproduceable with Redmine 2.2?

Can someone test this please?

#7 - 2013-05-11 03:44 - Jean-Baptiste Barth

- *Status changed from New to Closed*

- *Resolution set to Cant reproduce*

Maybe improved with [r2011](#). I close this issue as there's no feedback.
