

Redmine - Defect #28309

Error when query filter model inherited from other class which inherited from Query

2018-03-08 12:55 - Eduard Panov

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.00 hour
Target version:		Affected version:	3.4.4
Resolution:			
Description			
<p>We have a plugin, where: MyPluginModelQuery < MyCustomClassQuery < Query</p> <p>After redmine update 3.4.4 have a string</p> <p>https://github.com/redmine/redmine/commit/fd3c08aaa107e2c5a412a06aea6890b147e46aaf#diff-0fd59f260b10d1cfcf0c5695de8a99e6R90</p> <p>where call Query.get_subclass</p> <p>where a condition subclasses.include? klass</p> <p>And if my MyPluginModelQuery not a direct children of Query error raised.</p> <p>My suggest: improve string https://github.com/redmine/redmine/blob/master/lib/redmine/subclass_factory.rb#L32 for support children's any deep, for example unless klass < self</p>
