Category:	Permissions and roles	Estimated time:	0.00 hour
Target version:			
Resolution:			
Description Currently we only have following permission control over files (and I assume attachments) <ul style="list-style-type: none">• View files• Manage files I propose to split the latter into (at least) two - separately add and remove, to basically prevent users from deleting attachments/content.			

History

#1 - 2018-03-14 02:51 - Go MAEDA

- Subject changed from "Manage files" should be split to add and remove to "Manage files" permission should be split to add and remove
- Category changed from Files to Permissions and roles
