

Redmine - Defect #2833

scripts/generate script doesn't use the database settings?

2009-02-24 21:36 - Robert Chady

Target version:	Affected version:
Resolution:	
Description	
<p>When I ran "ruby script/generate redmine_plugin TestForMe", I was greeted by a nice backtrace. Reviewing the backtrace, it shows that generate tries to connect to mysql, but it uses the current user rather than the one configured for redmine. It also seems to require the user to not have a password set.</p> <p>I believe this is a bug, unless there is a way to specify the user/password when calling generate. Unfortunately, this means I can't currently start the plugin I'm working on.</p> <p>This was done against r2521, running Rails-2.2.2, and mysql-5.0.45.</p>	

History

#1 - 2009-02-25 02:48 - Robert Chady

- Status changed from New to Resolved

Nevermind, by default it tries to use the development RAILS_ENV and just blows up miserably. Made it use RAILS_ENV="production" and all was happy happy.
