Description			
<p>My problem:</p> <p>I have some groups and about 5 peoples at group. One of users have extended privileges to change assigned_to_id value. And i expect, that i can see information about groups where logged in user is a member, but i got "Forbidden" as response.</p> <p>I don't understand for what i need admin permissions for it... I just want to see my groups as i can see project memberships.</p>
