

Redmine - Defect #28659

Redmine 3.4-stable + Passenger failed to start: cannot load such file -- bundler/setup (LoadError)

2018-04-28 18:49 - herbert koelman

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	3.4.2
Resolution:	Invalid		
Description			
When I try to access Redmine through passenger I end up with a web page that says :			
Application error			
Rails application failed to start properly			
The Apache error log records these error messages:			
<pre>/usr/share/rubygems/rubygems/core_ext/kernel_require.rb:55:in `require': cannot load such file -- bundler/setup (LoadError) from /usr/share/rubygems/rubygems/core_ext/kernel_require.rb:55:in `require' from /home/redmine/redmine/config/boot.rb:4:in `<top (required)="">' from /usr/share/rubygems/rubygems/core_ext/kernel_require.rb:55:in `require' from /usr/share/rubygems/rubygems/core_ext/kernel_require.rb:55:in `require' from /home/redmine/redmine/public/dispatch.fcgi:3:in `<main>'</main></top></pre>			
The relevant line seems to be /home/redmine/redmine/config/boot.rb:4:in `<top (required)="">'</top> .			
<pre># Set up gems listed in the Gemfile. ENV['BUNDLE_GEMFILE'] = File.expand_path('../../Gemfile', __FILE__) require 'bundler/setup' if File.exists?(ENV['BUNDLE_GEMFILE'])</pre>			
I'm running:			
<ul style="list-style-type: none">• Redmine 3.4-stable (as returned by git status)• Fedora 27• Passenger-5.2.1• Using postgresql 9.6.8			
Redmine starts up when I use rails' web server bundle exec rails server webrick -e production.			
Any help is welcomed

- Resolution set to Invalid

Probably this is not a defect of Redmine core but a problem of installation. Please use forums for question after reading [How to request help](#).
