The cause of this issue is the changed behavior of csv gem. csv gem 1.0.2 throws MalformedCSVError instead of ArgumentError if the library find invalid byte sequences in a CSV file. As a result, Redmine displays the error :error_invalid_csv_file_or_settings instead of :error_invalid_file_encoding.

The behavior has changed by this commit.

<https://github.com/ruby/csv/commit/88a3471203a3bc83d58ab015e92182ae5d8e0ad0>

The current versions of Redmine expect ArgumentError if the parameter and file encoding does not much.

No, csv gem does not support Ruby < 2.3. Redmine 4.0.0 will support Ruby 2.2.2 and later. ([#25538](#)).
