Description

I suggest some i18n helpder script, so every translator could see what's missing a translation.

Or a script that make ethe addition of missing i18n vars to all other languages, with default english text.

History

There's a rake task for it: rake locales:update

Like the description says:

```
$ rake -T locales
rake locales:update  # Updates language files based on en.yml content (only works for new top level keys).
```

I'll update the patch I sent at [#2872](#) to include the new vars to all languages.
