Resolution:	Invalid		
Description			
Hello!			
I had this project i've been working on.			
I found that the best way for me to use REST API is with cURL.			
But then i came into the problem that with the cURL, Admin account and passwords are shown in the command.			
[[http://www.redmine.org/projects/redmine/wiki/Rest_api_with_curl]]			
curl -v -H "Content-Type: application/xml" -X PUT --data-binary "@wiki.xml" -u login:password			
http://redmine/projects/foo/wiki/page_test.xml			
Is there a way to do this but with API Key?			
I am updating a Wiki page but on my own redmine server.			
Or do you guys have any other ways that i could do the same that curl does but with API Key?			
(I have bunch of data that will be updated to a Wiki page weekly) Basically rewritten always.

You can pass API key using X-Redmine-API-Key header field.

```
curl --header 'X-Redmine-API-Key: YourApiKey' 'http://redmine.test/issues.json'
```
