Description

Dear All,

28/05/2018 is non-working day in Armenia. While opening the dates I have noted in admin panel as non-workign day. Our call center operator who is scheduling appointments have seen that date was blocked. Some minutes ago we have received a call from the applicant who has scheduled an appointment on the locked date. How can that happen that I am blocking the date and after some days people can schedule an appointment?

Can you please check it from your end, if that is possible, when was the date unblocked?
