History

#1 - 2018-05-27 13:40 - Go MAEDA

- Related to Defect #15985: Email address with non-ASCII character causes delivery error added

#2 - 2018-05-27 14:00 - Go MAEDA

Current versions of Redmine accepts only alphabets, numbers, and hyphens for the domain part of email addresses ([source:tags/3.4.5/app/models/email_address.rb#L29](#)).

Please use [Punycode](#) to avoid this issue. For example, use "[info@xn--80aswg.xn--90ais](#)" instead of "info@сайт.бел".

#3 - 2018-07-07 09:06 - Go MAEDA

- Related to Feature #29208: Support email addresses with IDN (internationalized domain names) in user accounts added

#4 - 2018-07-08 01:34 - Go MAEDA

I posted a patch to support IDN (internationalized domain names) as [#29208](#). You will be able to Russian domain names if the patch is merged.

#5 - 2018-07-08 04:31 - Go MAEDA

- File support-idn-email-addresses-v4.diff added

#6 - 2018-07-08 07:40 - Go MAEDA

- File deleted (support-idn-email-addresses-v4.diff)

#7 - 2018-12-05 11:58 - Дмитрий Ванчук

Thank you so much!

#8 - 2024-02-01 09:53 - Go MAEDA

- Status changed from New to Closed

- Resolution set to Fixed

The feature to support IDNs (Internationalized Domain Names) was implemented in [r22667](#). If you enter an email address with an IDN into your account, Redmine will convert the domain to its ASCII equivalent before saving the email address (e.g. marie@soci  t  .example => marie@xn--socit-esab.example).
