Description

It would be hugely beneficial to be able to add custom trackers. This could be at a project wide, or even system wide level. I would envision something along the lines of how you add Issue Categories. This is useful because people and companies have slightly different ways of doing things, reporting issues, etc. Would cater for everyone.

You can add your own trackers to redmine.
Just go to the Admin menu and click on "Trackers" (not
on sub items). You will see the list of the existing trackers
and you will be able to add some more.
I known that the Admin menu is not very intuitive, i'll try to
improve it.

I hope it answers your question.
