Redmine version: 3.4.4.stable.17183

Informations about the specification of the custom field

Format: Key/value list

Multiple values: True

Display: checkboxes

Required: no

Used as a filter: no

Visible: to any users

Trackers: Patch

Projects: a subproject

The Problem

In the response of an API call for an issue (<url>/1234.xml) with an custom field specified, i find a custom field element like this:

```
<custom_field id="1" name="applied-to" multiple="true">
  <value type="array">
    <value>1</value>
    <value>2</value>
    <value>3</value>
  </value>
</custom_field>
```

So the problem is, that i get back the values of the custom field, but not the labels for this values.

When i visit the webpage for this issue, the labels of the values are displayed, so it is no permission issue.
