Description

"<< my projects >>" can filter issues which belongs to projects where I joined as a member.

I would be very much appreciated if a role condition is added to this filter.

Like this;

[V] project [is v] [<< my projects >> v] as role [<< any >> v]

Selecting "<< any >>" works just same as current "<< my projects >>" filter.

Selecting a role from the dropdown can filter issues by projects that I joined as the specific role.

History

Same can be applied to "Email notifications" settings in "My account".

"For any event on all my projects" to "For any event on my project as role ...".

I'd really appreciate this new feature too, in both cases
