**Description**

Here is, I think, a little bug in the generation of http links when using the code modifier @. Specifically, when an URL is surrounded by @ ... @, plain text is rendered instead of a link. However, if a text is added to the link, then the link is generated and the format is as in code block. Next example shows the cases.

```
http://www.redmine.org -- regular format
@http://www.redmine.org@ -- code format but plain text
@"http://www.redmine.org":http://www.redmine.org@ -- code format and link
```

[http://www.redmine.org](http://www.redmine.org)
http://www.redmine.org
"http://www.redmine.org":http://www.redmine.org
