Target version:	
Resolution:	
Description	
would be great see initially by clicking on "SVN Repository" the last x (configurable) commits. i think displaying the last 5 commits under the "Browse" table could be nice.	

History

I believe this would be better served by the Activity page.

There would need to be some changes to the way in which redMine deals with the repository, importing a list of the changesets into a cache. This allows for other features noted in http://rubyforge.org/tracker/index.php?func=detail&aid=9221&group_id=1850&atid=7163

While on that matter, the Activity page should also list Wiki changes. Might see if I can create a patch for this.

#2 - 2007-03-25 08:14 - Jean-Philippe Lang

SVN commits are now stored in the database, and added to the activity view and the search engine.

New commits are automatically retrieved and stored when consulting the repository in the app. This behaviour can be disabled by unchecking 'Autofetch commits' in configuration settings.

Commits can be fetched offline by running (recommended at least for the initial import of past commits):
ruby script/runner "Repository.fetch_changesets"
It will load commits for all of the repositories.
