Description

Hi Redmine Team,

I don't know if this bug has already be reported or fixed, but I have a 500 error when I try to view a t topic which have a quote character (') in his title.

In log files, I see a sql request with a "like" and my topic title in many words and a "like" with an unescaped quote (!), I think this is the reason of the bug.

I don't know if the bug is caused by one of my plugins.

So here is some of the log files, my production redmine version and the list of my plugins installed, I can not give more because it's a professional server.

My Redmine environment and plugins:
