Target version:				
Resolution:			**Affected version:**	3.4.6

Description

I have a role that has the Manage versions permission.
It is called "Analista/desenvolvedor".

Then I have a project in which a user is assigned to the role "Analista/desenvolvedor".
And a subproject with the @Inherit members" option checked.

When that user tries to create a new Version, the only possible values in Sharing are "None" and "Subprojects".

Then I have another project with similar configuration in which the user <u>can</u> set any value to the Sharing option.

I'm considering this to be a defect because didn't find anything in the docs but the permission Manage versions in roles configuration.
Believe other aspects should not interfere.

```
Environment:
  Redmine version                3.4.6.stable
  Ruby version                   2.3.7-p456 (2018-03-28) [x86_64-linux]
  Rails version                  4.2.8
  Environment                    production
  Database adapter               Mysql2
```
