Description			
When filtering tickets 'text' fields, I mean builtin 'text' fields like 'title' AND also 'text' custom fields, you can choose between : <ul style="list-style-type: none">- 'is'- 'contains'- 'is not'- 'doesn't contain' It will be nice if you add new choices : <ul style="list-style-type: none">- 'regex'(this one should be very very useful)- 'is empty'- 'is not empty'

Is there a workaround to filter a text field with a criteria 'is empty' or 'is not empty' ?

#2 - 2009-05-20 04:53 - sebastián scarano

"is not" and "does not contain" could be better solved with a general "not" operator, that could added to every operator no matter the data type...

#3 - 2009-09-14 11:29 - Jm Delehaye

Browsing sources, I found a workaround : Countains ' _ '

In SQL, it becomes :

... LIKE %_ %...

which means "contains something".

+1. This is very useful.
