

Redmine - Feature #29435

Render forums list in project settings as table

2018-08-24 15:03 - Bernhard Rohloff

<b>Resolution:</b>	Wont fix		
<b>Description</b> The list of discussion boards is poorly implemented as nested div containers with inline styles and extra CSS classes to look like a table. I think if it should look like a table, it should also be one. This also improves the consistency of the UI and reduces the list of CSS classes, theme developers have to style.  new_table_look.png

- Bernhard, thanks for the patches, but I think that you should see [r15337](#) for [#12909](#) where Jean-Philippe Lang replaced the tables with divs in Forum. Because of that, I think that reverting to a table is not a good idea. Also, I prefer to have divs instead tables and maybe is a good idea to replace on other views the tables with divs.
- What we can do is to restore the alternate row colors which is missing now.
- Please let me know if I can close this ticket as "Won't fix".
- #2 - 2018-08-26 12:14 - Marius BĂLTEANU**
- Status changed from New to Needs feedback
  - Assignee set to Bernhard Rohloff

- Essentially you are right. Divs would make more sense for responsive designs nowadays. I stumbled upon this particular view while creating a new theme from scratch and I found it an extremely odd and inconsistent experience that I have to apply extra styles for one single table.
- What we can do is to restore the alternate row colors which is missing now.
- Because it's not a huge problem for the casual user and doesn't effect the default theme that much I would let it as it is.
- Please let me know if I can close this ticket as "Won't fix".
- I've opened a feature request for replacing the tables in [#29451](#) and you can close this issue in favor for this approach.
