<b>Description</b>			
<p>In the same structural manner as files allow documents to be stored by version. This is because we get lots of different documents that are specific to a version so being able to group them under versions would be great.</p> <p>Layout:</p> <ul style="list-style-type: none"><li>- Version<ul style="list-style-type: none"><li>-- Document Category<ul style="list-style-type: none"><li>--- Document Header<ul style="list-style-type: none"><li>---- The actual files for download</li></ul></li></ul></li></ul></li></ul> <p>Example:</p> <ul style="list-style-type: none"><li>- V1.5<ul style="list-style-type: none"><li>-- Change Requests<ul style="list-style-type: none"><li>- - - Change Request 1<ul style="list-style-type: none"><li>- - - - Documents</li></ul></li><li>- - - Change Request 2<ul style="list-style-type: none"><li>- - - - Documents</li></ul></li></ul></li><li>-- User Documentation<ul style="list-style-type: none"><li>- - - Quickstart Guide<ul style="list-style-type: none"><li>- - - - Documents</li></ul></li><li>- - - Manual<ul style="list-style-type: none"><li>- - - - Documents</li></ul></li></ul></li></ul></li><li>- V2.0<ul style="list-style-type: none"><li>-- Change Requests<ul style="list-style-type: none"><li>- - - Change Request 1<ul style="list-style-type: none"><li>- - - - Documents</li></ul></li></ul></li></ul></li></ul> <p>etc. etc.</p> <p>This is only a request on the structural side; I think the documents would still benefit from the current UI rather than emulating the files section UI.</p> <p>Also it looks like currently all the documents are stored in a single "files" folder on the server. Since files could have the same names would it be possible to create sub directories based on the structure above?</p>
