Description			
<p>It would be great if it was possible to have different assignement for different roles.</p> <p>Now you can decide if an Issues can be assigned to a role. But it would be very useful decide to which role you can assign issue and the workflow.</p> <p>For example: Tracker:BUG Role1 can assign only to role2 role2 can assign only to role3 role3 can assign to role1 and role2 ...</p> <p>Could be useful?</p>
