# Redmine - Patch #29614

# redmine:email:read and rdm-mailhandler.rb should use safe\_receive instead of receive

2018-09-15 07:05 - Go MAEDA

Status:ClosedStart date:Priority:NormalDue date:Assignee:Jean-Philippe Lang% Done:0%

Category: Email receiving Estimated time: 0.00 hour

Target version: 4.0.0

### Description

Since <u>r12995</u>, rake redmine:email:receive\_imap and rake redmine:email:receive\_pop3 use MailHandler.safe\_receive instead of receive to handle exceptions which raised while processing broken email. However, rake redmine:email:read and MailHandlerController#index (invoked from rdm-mailhandler.rb) still uses receive method, not safe\_receive method.

I think rake redmine:email:read and MailHandlerController#index should also use safe\_receive method instead of receive method to handle exceptions in a same way with receive\_imap and receive\_pop3.
