Redmine - Feature #29631

Add support to include repository file content in Wiki

Description

There is a Markdown macro include. It allows to include one wiki page inside another:

```
!{{include(Foo)}}
```

I would like to have similar functionality, but allowing inclusion of repository file. It could be used like this:

```
!{{include(source:repo_identifier|some/file)}}
```

This way crucial documentation (README.md, INSTALL.md and so on) can be available both in repository and easily accesible from Redmine Wiki without redundancy (and inconsistencies).

If such feature could go into Redmine core, I'm eager to provide relevant patch.

I am also very much interested in this functionality. It would avoid redundancy and add a great deal of flexibility when creating documentation.
