Description

Hi,

I am wondering if there is anyway to get events generated in events manager to appear automatically as posts so that they can be displayed on the home page along with other posts. I am currently using the 2011 theme. If this is not possible, I have a second question.

I am doing work for the CPCP (http://cpcp.commons.gc.cuny.edu) and updated their page and switched to a new theme. The old theme was a child theme created by someone else called "Mellon Committee Sites." I am not sure all of the features on this child theme but one was that event manager events showed up automatically as posts on the front page. I can go back to this child theme but I need to update the site aesthetically which means placing a new banner image and adjusting the color scheme. When I go to "customize," however, within the Mellon Committee Child theme, I am unable to change anything where the banner is. It appears to be coded into the site and no longer flexible. How might I make this change?

thanks,
Mark

You just opened this issue in the issue tracker of the Redmine project itself. You likely want to open it in your organization's Redmine installation instead.
