Description

I am checking up "Redmine" to change issue tracking system from "JIRA" to "Redmine".
But there are some problems for change.

I want to append some features as follows.

- allow the version field on an issue to assign multiple versions.
- add "affected version" field. (means which versions are affected by the issue)
- add "multiple select" custom field. (Feature #1189)

Our project management system like this.

```
 Core-Module (Package/Framework)
      |- Project A (customize for CustomerA)
      |- Project B (customize for CustomerB)
      |- ...
```

If I fix core-module, the issue has much effect on some projects. So I want you to support multiple select version field.

We can change to "Redmine" if there features include in version 0.9.
I want you to think about these features.

typo:

> I want to append some features as follows.

=> I want **you** to append some features as follows.

Of course, If you cannot, I'll append these features by myself.
But I want you to support these features as **official** functions.

We would also like to have an "affected version" field. But I just found the "custom fields" feature. This might cover our use case.

#3 - 2013-03-22 16:31 - Dipan Mehta

This functionality is now possible out-of-the-box using custom field of type "version".

This issue should be closed now.

#4 - 2013-03-26 05:41 - Toshi MARUYAMA

- Due date set to 2013-04-30

- Status changed from New to Needs feedback

The same applies to issues [#5996](#) - is a duplicates of [#2096](#) as well.

#6 - 2013-03-27 03:23 - Toshi MARUYAMA

- Description updated

#7 - 2013-05-07 09:51 - Daniel Felix

- Status changed from Needs feedback to Closed

This seems to be resolved. As there is no other feedback, I'm closing this issue.
