Description																	
<p>I want feature to add other HTML pages/application within Redmine application and run from the same server. Currently i have moved the application inside "Public" folder in Redmine app. So that i am able to access the same as</p> <p>"http://redmine_app_link/my_application"</p> <p>"http://redmine_app_link/my_application/page1"</p> <p>"http://redmine_app_link/my_application/page2" etc</p> <p>But this application opens without authentication from Redmine. If I just point to the path it opens without Authentication.</p> <p>Is there any possibilities to integrate Redmine Authentication to open these web html page in this folder. Or any mechanism/folder where i can move my html app and link inside redmine. Please suggest how to go ahead.</p> <p>My environment details are as follows</p> <p>Environment:</p> <table><tr><td>Redmine version</td><td>3.4.6.stable</td></tr><tr><td>Ruby version</td><td>2.3.3-p222 (2016-11-21) [i386-mingw32]</td></tr><tr><td>Rails version</td><td>4.2.8</td></tr><tr><td>Environment</td><td>production</td></tr><tr><td>Database adapter</td><td>Mysql2</td></tr></table> <p>SCM:</p> <table><tr><td>Subversion</td><td>1.10.2</td></tr><tr><td>Git</td><td>2.17.1</td></tr></table> <p>Redmine plugins:</p> <p>no plugin installed</p>				Redmine version	3.4.6.stable	Ruby version	2.3.3-p222 (2016-11-21) [i386-mingw32]	Rails version	4.2.8	Environment	production	Database adapter	Mysql2	Subversion	1.10.2	Git	2.17.1
