Resolution:	Invalid		**Affected version:**	3.3.1

Description

Hi - Sorry if this bug has alread been submitted - Tried to find it, but the Redmine Search returns over 1000 results for defects with keyword "API".
Also this issue might be already solved because I have an older version of 3.3.1
Thanks,
M

I think I found a bug in the API.

Here is my setup:
I have a project with 2 different trackers. These trackers have different mandatory custom fields.
e.g.
Project A - Tracker X has the custom fields A1, A2 and A3. All three a mandatory.
Project A - Tracker Y has the custom fields A1, A2 and A4. All three a mandatory. (Doesn't really matter in this)

The thing is A3 is mandatory, but not existing in Tracker Y.
Tracker X is the default Tracker of the project.

If I add an issue via the API for Tracker Y I cannot, because I get the error message that A3 is mandator (but it does not even exist in this Tracker Y).

For now I simly made the field A3 not mandatory and without changing the XML I can add the issue with POST.

History
