<b>Category:</b>	SCM extra	<b>Estimated time:</b>	0.00 hour
<b>Target version:</b>			
<b>Resolution:</b>			
<b>Description</b>			
<p>I am using automatic repository creation via reposman.rb. I wanted the ability to have reposman.rb only create repositories when i wanted it to. Currently it will create them for every project. I also wanted the ability to have a public or a private repository regardless of my project being private or public.</p> <p>I have included a patch done against Redmine .0.8.2. I also had to add 2 new fields to the projects table in the sql database. The 2 fields I added were create_repo and public_repo.</p> <p>create_repo = tinyint(1) with a default of 0 public_repo = tinyint(1) with a default of 1</p> <p>I have added 2 check boxes to the project settings and add project. They will turn on/off auto creation for the project and if create then will set the public/private access for the project.</p> <p>I am only using Subversion right now so I am not sure how this will work with Git.</p> <p>This obviously requires the user to have "Enable WS for repository management" checked.</p> <p>This also makes it possible to utilize auto creation and give the user the ability to set up an unique repository for a project. If they want to link to a special repository on another box they can do this without being thwarted by reposman.rb trying to do its thing.</p>
