<b>Resolution:</b>	Wont fix		
<b>Description</b>			
Recently on Alpine's redmine I've encountered an issue where when I have javascript disable (noscript extension) and try to watch some issue, I get 404 error. That is not completely expected.			
Original report on alpine's bug tracker: <a href="https://bugs.alpinelinux.org/issues/10033">https://bugs.alpinelinux.org/issues/10033</a>			

### History

#### #1 - 2019-03-02 15:38 - Gray Wolf

And it happens even here. So it's probably not some configuration-related issue.

#### #2 - 2019-03-03 01:06 - Go MAEDA

- *Resolution set to Wont fix*

Redmine is not supposed to be used without JavaScript. Many functions don't work with JavaScript disabled.

#### #3 - 2019-03-03 13:08 - Gray Wolf

So why not at least show some warning "This site requires javascript" or something like that? Button that actually does something but ends with 404 is not very explicit about why it failed.

In my opinion, a web browser with JavaScript disabled is a very special environment in 2019. So, I don't think Redmine have to show such warnings.

But if you think Redmine should show the warning, please feel free to open a new issue to request the feature.
