Redmine - Patch #31035
Remove the workaround for #12090

2019-03-17 05:00 - Go MAEDA

Status: New
Priority: Normal
Assignee: 
Category: Code cleanup/refactoring
Target version: Candidate for next major release

Description

If the patch #30820 that drops "Blind carbon copy recipients (bcc)" setting is accepted, we can remove the workaround for #12090 that fixes the issue that email recipients are not logged when the setting is enabled, because emails will always be sent using To.
